

Veneers

Veneers, are paper-thin, custom made coverings that conceal the front and side surface of your tooth, much like a mask or an artificial fingernail. Veneers are a cosmetic alternative for a variety of dental conditions of the front teeth including:

- Diastemas – spaces between the teeth
- Broken or chipped teeth
- Unsightly, stained or washed out fillings
- Permanently stained or discoloured teeth
- Misshapen or crooked teeth

Placing veneers provides major changes in teeth without the requirement of cutting them down severely. A healthy natural look is achieved with little or no discomfort. However, depending on the situation, crowns, bonding, bleaching, microabrasion, or orthodontics may be suggested instead of veneers.
